

Securing operations

- Inspect and repair damage to your property, critical infrastructure and equipment
 - Sidewalks
 - Access
 - External structure, including roof, siding and entrances
 - Water installations
 - Gas installations
 - Electric systems
 - Equipment

- If necessary, hire a specialized contractor to clean up the workplace

- Schedule regular inspections to prevent the risk of fire and limit the risk of malfunctions or accidents

- Assess the strengths and weaknesses of your safety measures on an ongoing basis

- Respect the capacity limits of your warehouse and your sprinkler system

- If changes were made, reassess the risks facing production and storage arrangements

- Communicate production or warehouse changes to your employees so they are aware of existing and new risks
